

Self-Assessment

Working in a team is always a rewarding experience. During our presentation on “AI Ethics in Robotic Surgery and Healthcare,” I focused on the principle of non-maleficence, which means “do no harm.” I researched my topic in depth and also supported and encouraged my teammates with their own parts of the presentation.

One of my main contributions was coordinating the team’s overall efforts. I took responsibility for making sure everyone understood each other’s topics, which helped us stay aligned and deliver a clear, cohesive presentation. We connected regularly on Microsoft Teams, where I helped facilitate discussions, shared insights, and ensured everyone was on track.

I played a key role in managing the flow of the presentation. I made sure that each section transitioned smoothly and that all group members were confident with the content. I also offered suggestions for improvements and shared feedback to help enhance our work. Communication and collaboration were essential, and I’m proud of how well the group worked together.

Overall, I gave my best to support the team, maintain a shared vision, and help everyone feel prepared and involved. The final outcome reflected our collective efforts, and I’m glad to have contributed to such a well-organised and insightful presentation, collaborating with a very innovative and responsible team.
